PROFESSIONAL SUMMARY

Junior Full-Stack Developer with practical experience building web, desktop, and mobile applications using Java and JavaScript technologies. Strong foundation in Spring Boot, React, SQL databases, and REST APIs. Experienced in delivering real-world solutions through freelance and project work.

PROFESSIONAL EXPERIENCE

Founder & Developer — Teodor Web Solutions (Jan 2022 – Present)

- Designed and developed responsive web applications for clients using modern JavaScript frameworks and backend technologies
- Built full-stack systems integrating REST APIs, authentication, and database management
- Gathered requirements and translated business needs into functional technical solutions
- Deployed and maintained applications on cloud platforms such as Vercel and Render

PROJECTS

Church Management System – Java | Spring | JPA | MySQL | Render

- Centralized church operations including member management, ministries, and attendance tracking
- Replaced spreadsheet-based workflows with structured database-driven processes
- Built RESTful backend services for scalable data access and reporting
- Improved administrative efficiency and data consistency across church operations

Desktop Point of Sale – Java | Swing | JDBC | MySQL

- Developed an offline POS system with product management, cart handling, and transaction processing
- Integrated MySQL database using JDBC for persistent storage
- Packaged the application with a Windows installer for easy deployment
- Designed modular architecture separating UI, logic, and database layers

TradeFlow SA – Web App | Quotes | Invoices | Vercel

- Built a dashboard system for managing customers, services, quotes, and invoices
- Designed workflows tailored for South African service-based businesses
- Implemented structured data handling for financial tracking and reporting
- Deployed on Vercel for reliable cloud access and performance

Website Agent – Web App | Site Auditing | AI Workflow | Render

- Developed a diagnostic tool to analyze websites and detect performance and usability issues
- Implemented automated checks to flag common development and SEO problems
- Provided actionable recommendations to improve site quality and performance
- Designed workflow to assist developers in identifying and resolving issues quickly

Banking App Demo – Spring Boot | React | REST API | Render

- Built a full-stack banking simulation with account management and transaction features
- Developed REST APIs using Spring Boot and integrated with a React frontend
- Implemented secure data handling and structured service layers
- Demonstrated end-to-end frontend-backend communication in a production environment

Inventory SaaS Platform – Next.js | Supabase | PostgreSQL | Vercel

- Created a multi-user inventory system with authentication and role-based access
- Implemented real-time data synchronization using Supabase
- Built responsive dashboards for managing stock and operations
- Deployed cloud-based solution with environment configuration for scalability
