PROFILE

NQF 6 Systems Development graduate building reviewable Java, Spring Boot, SQL, web, Android, and desktop applications. Strongest in practical business systems: authentication, role-based access, relational data, CRUD workflows, reporting, CSV import, deployment, and debugging. Brings 10 years of IT support discipline, clear user communication, and calm incident ownership into junior software development work.

CORE STACK

Java: Spring Boot, Spring, JPA, JDBC, OOP, MVC, REST APIs
Data: PostgreSQL, MySQL, Supabase, SQL modelling, persistence
Frontend: JavaScript, HTML5, CSS3, React, Next.js, Android SDK, Swing
Workflow: Git, GitHub, Render, Vercel, debugging, documentation

SELECTED SOFTWARE PROJECTS

Business Operations Hub	Java, Spring Boot, PostgreSQL, Render
- Designed and deployed an operations platform for lead capture, CSV imports, invoice tracking, reporting, user administration, and account-security workflows. - Implemented role-aware business flows and SQL-backed state using a controller, service, and data-layer structure suited to maintainable backend work. - Worked through deployment configuration, import edge cases, and user-flow defects to turn a fragmented spreadsheet process into a controlled web application.	
Church Management System	Java, Spring, JPA, MySQL
- Built a centralized administration system for member records, ministries, attendance, and reporting, replacing disconnected spreadsheet-style tracking. - Modelled JPA entities, relational data, validation rules, CRUD screens, and reports around day-to-day admin workflows.	
Banking Application Demo	Spring Boot, React, REST API
- Built and hosted a full-stack banking demo with account-management and transaction workflows connected through REST endpoints. - Practised frontend/backend contract debugging, request handling, and transaction-style state changes across a deployed stack.	
Desktop Point of Sale	Java, Swing, JDBC, MySQL
- Created an offline-capable POS covering product management, cart processing, transactions, and database persistence. - Packaged the application as a Windows installer so it could be reviewed as a usable product, not only as source code.

EXPERIENCE

Independent Software Projects Junior Systems Developer <i>Teodor Dev Tech / self-directed and small-client work</i>	2022 - Present <i>Pretoria</i>
• Built web, backend, mobile, and desktop solutions from problem definition through implementation, testing, deployment, and iteration. • Translated workflow requirements into data models, authentication rules, forms, dashboards, CRUD modules, reports, and deployable releases. • Used GitHub for version control and maintained reviewable source paths and downloadable releases so technical work can be assessed directly. • Investigated defects across application, database, deployment, and user-flow layers, drawing on structured IT troubleshooting habits.	
Adcock Ingram IT Technician	2018 - 2022
• Resolved hardware, software, network, printer, workstation, and access issues while communicating clearly with business users. • Supported stable day-to-day IT operations through workstation setup, maintenance, incident resolution, and practical user guidance.	
Netsurit IT Technician	2012 - 2015
• Delivered service-focused desktop, user, and basic network support in a managed IT environment, building strong incident ownership and documentation habits.	

EDUCATION AND CERTIFICATIONS

System Development, NQF 6 Boston City Campus	2022 - 2024
System Support, NQF 5 Department of Higher Education and Training	2017
Microsoft Certified IT Professional Torque IT	2012
