

Theodore Nelson

SOUTH AFRICAN JAVA BACKEND DEVELOPER | BUSINESS SYSTEMS | WORKFLOW SOFTWARE

I build Java and Spring Boot applications for business systems, internal tools, and workflow-heavy software. Strong fit for teams that need someone who can contribute to backend logic, SQL-backed processes, auth, and practical delivery around real operational workflows instead of tutorial-style examples.

Target roles: Junior Java Developer, Junior Backend Developer, Workflow-Focused Full-Stack Developer

EXPERIENCE

Teodor Dev Tech | Web Developer / Owner

Jan 2022 - Present

Project delivery across business systems, internal tools, and workflow-focused software

- Lead delivery from requirements gathering through launch and support across Java, Spring Boot, React, Next.js, SQL, and hosting workflows.
- Translate client needs into features, data structures, auth flows, reporting requirements, and usable interfaces.
- Build and deploy systems that support admin work, record keeping, quoting, task tracking, and business operations.
- Built strong ownership, prioritisation, troubleshooting, and business-facing communication that transfers well into a junior engineering team.

Open to junior Java, backend, and workflow-focused full-stack roles

CORE SKILLS

Backend

Java, Spring Boot, REST APIs, JPA, JDBC, validation, business logic, auth flows

Workflow interfaces

React, Next.js, HTML, CSS, responsive interfaces, forms, dashboards, admin workflows

Data

MySQL, PostgreSQL, SQL schema design, relational modelling, user roles, CRUD flows

Delivery

Git, GitHub, deployment support, hosting, SSL, requirement gathering, release readiness

SELECTED PROJECTS

Church Management System

Live app

Java | Spring | JPA | MySQL

- Built a live system for members, ministries, and attendance, replacing slow spreadsheet-based administration.
- Designed backend workflows and relational data structures for recurring operational tasks and reporting.

TradeFlow SA

Business workflow

Next.js

- Built a platform for South African service businesses needing quoting, invoicing, and client management in one workflow.
- Shows ability to design software around real back-office pain points instead of generic portfolio features.

Inventory SaaS Platform

Multi-user app

Next.js | Supabase | PostgreSQL

- Built a multi-user inventory platform with authentication, role-based access, client portals, and synchronized business data.
- Demonstrates user roles, shared operational data, and realistic workflow software beyond simple CRUD demos.

Banking App Demo

Full stack

Spring Boot | React

- Built and deployed a hosted banking demo showing account management and transaction flows across a Spring Boot and React stack.
- Demonstrates coordination between backend business logic and a browser-based workflow interface.

Desktop Point of Sale

Desktop app

Java | Swing | JDBC | MySQL

- Created an offline POS application covering product management, cart handling, transaction history, and installer packaging.
- Delivered desktop UI, persistence, and transaction processing in one end-to-end operational tool.

User Registration Web App

Web app

CRUD | Forms | User management

- Built a registration-focused web app demonstrating reliable form handling, account capture, and record management.
- Shows clean browser-based workflow design for user administration and ongoing CRUD operations.

EDUCATION

System Development (NQF 6)

2022 - 2024

Boston City Campus

Studied Java, databases, web services, SDLC concepts, and application design.

System Support (NQF 5)

2017

Department of Higher Education and Training

MCTS

2012

Torque IT

WHY SHORTLIST ME

- Proven project delivery experience, not only coursework.
- Comfortable across backend, frontend, database, authentication, and deployment tasks.
- Understands business workflows and builds around operational needs.
- Already focused on business systems and internal tools teams actually use.
- Brings ownership, reliability, and strong growth potential.
